

SD-WAN for hybrid working

The future of work is flexible – where does that leave your endpoint security status?

With Vapour's security-first SD-WAN architecture – powered by Fortinet – businesses can integrate endpoint and network security, with ease, for high performance and ultra-safe remote working.

We all know that the traditional 9-5 is long gone, with employees seeking increasing flexibility from their working day – not least when it comes to location. Many people are keen to remain at home, some are hungry to return to the workplace, and others want the fluidity to decide from one day to the next. Hybrid working is definitely the future, but this isn't the easiest to manage from a network security perspective.

We've partnered with Gartner Magic Quadrant-recognised Fortinet, to deliver a highly secure SD-WAN solution for hybrid workers, which provides:

- Endpoint visibility and management
- Secure remote access
- Automated threat response

Think technically brilliant, operationally effortless. By integrating endpoint and network security through state-of-the-art SD-WAN technologies, we work closely with our customers to boost their threat intelligence and reduce their risk exposure, regardless of where employees decide to work from one day to the next.

And the best thing? It's available as an affordable SaaS licence, with no hardware requirements. Forget zero-touch provisioning – this is even easier!

What IT leaders need to know about SD-WAN hybrid working solutions:

- Our solution facilitates transparent visibility to each endpoint, and full control over individual compliance.
- Endpoint-borne risks such as firewall weaknesses or unsecure home routers will not pose a threat to your corporate network.
- Endpoint access is controlled dynamically by the SD-WAN solution, based on colleagues' real-time security posture.
- Security workflows are automated for effortless proactive management of endpoint risks.
- Instant alerts flag potential security threats and ensure incidents are contained in a timely manner.
- Your organisation will no longer be shackled by costly, management-intensive VPNs, usually available only for a limited number of senior colleagues.

Additional Services			
Cloud Hosted EMS		Add-on	
24x7 Support		Included	
FortiCare BPS		Included first year	

1. FortiClient (Linux) does not support this feature.
2. Only FortiClient (Windows) supports this feature.

Lite, Premium and Pro licenses are available for Windows, Mac & Linux.

- Our SD-WAN engine – a security-first cloud infrastructure – will automatically detect the speed, performance, and traffic on your network, understand it and 'fix' itself according to real-time activity.
- Securing colleagues via a downloadable licence means their security posture is protected whether they work from home, in a communal space, in the office – anywhere!

Intrigued? Let's talk it through...
